WHY CHOOSE **EUROGUARD®** **TRAY WRAPS?**

- The SMMS material is very user-friendly, is treated with antistatic and folds very smoothly.
- The tray wrap combination 40 NAR with 50 AR is both a cost effective as practical solution, the majority of the trays can be packed with this interleaved combination.
- Excellent quality of the SMMS material, in line with the rest of our Euroguard® program.
- The blue material is alcohol repellent and is therefore also usable as sterile field.
- Possible damage of the outer wrap is immediately visible because of the green/blue combination of materials.
- As mentioned above the **EUROGUARD® TRAY WRAPS** meet all requirements of the EN-ISO 11607. A technical datasheet is available on request.
- The tray wraps can be used for steam-, ETO- and plasma sterilisation.

MEDICA
EUROPE

EUROGUARD®

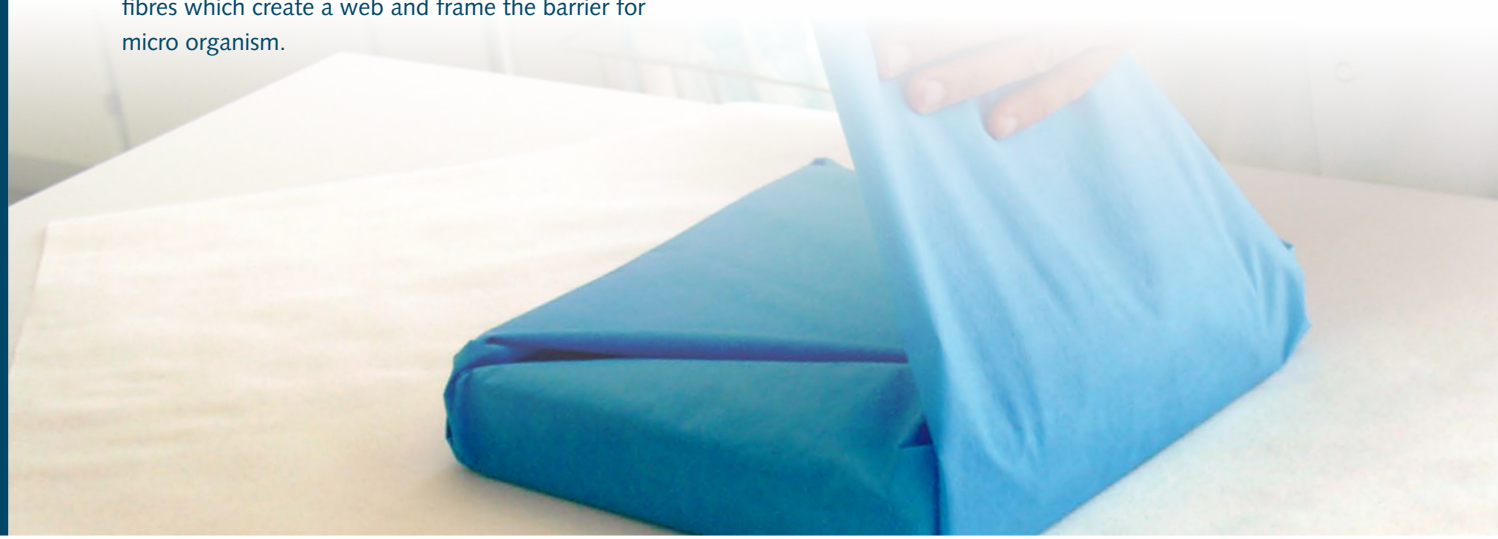
TRAY WRAPS

Medica Europe develops, manufactures and markets a wide range of medical disposables for the Operating Room, cardiac catheterisation laboratories, critical care units and interventional radiology centers.
Since many years we manufacture drapes and gowns under our own brand Euroguard®.
We have become specialists in the SMS and SMMS materials. With this expert knowledge we extended our range to the CSR field and we developed a sterilization packaging under the name **EUROGUARD® TRAY WRAPS.**

Medica Europe is aware of the responsibilities of the CSSD and delivers only sterilization packaging which meets the European standards.
The **EUROGUARD® TRAY WRAPS** meet the EN-ISO 11607.

EUROGUARD® TRAY WRAPS are made of SMMS material and consist of four layers of polypropylene (Spunbound, Meltblown, Meltblown, Spunbound).
The Spunbound layers are melted and spun, the fibres give the strength but also the drapebility characteristics.
The Meltblown layers consists of microscopic little fibres which create a web and frame the barrier for micro organism.

EUROGUARD® TRAY WRAPS is available in one interleaved combination:
40 grams green, non alcohol repellent, outer wrap
50 grams blue, alcohol repellent, inner wrap


EUROGUARD® TRAY WRAP blue is resistant to alcohol and is therefore besides sterilization package material also usable as sterile field in the Operation Room. The SMMS material has excellent moisture repellency which prevents the migration of micro organism.
The tray wraps are available in different sizes to fit the different dimensions of the trays.
