The LarySeal range of Laryngeal Mask Airways have the following common benefits, which are incorporated into the Clear, Blue, Multiple, MRI and Flexi.

- **Reduced risk of blockage**
- **Full glottis view**
- **Printed info on the main tube**

The deep design of the patient port reduces the risk of blockages by soft tissues. The open patient port allows for unrestricted use of an endoscope.

The supraglottic airway device allows for a clear view of the glottis with the use of an endoscope.

Guidance for appropriate air volume and size is printed on the main tube, allowing for quick and easy reference.

**Clearly labelled packaging**

Instructions for use are clearly shown on the packaging in both text and diagrammatic form.

**LarySeal in position**

The diagram shows LarySeal in position and demonstrates how the soft material of the cuff forms itself to the oropharyngeal area.

**Colour coded LarySeal Cuff Inflator**

The LarySeal Cuff Inflator has clearly marked increments, each one specifically colour coded to match the size colour coding of the LarySeal pilot balloon. Thus enabling easier and quicker identification of the correct measure for inflating the cuff of the LarySeal.
LarySeal - Colour Coding

The LarySeal range has a colour coded pilot balloon which corresponds to the size of the laryngeal Mask Airway, providing a clear visual indication of the size, therefore facilitating quicker selection.

![LarySeal](image)

**Colour Coded Pilot Balloon**

Easy identification of sizing by colour coded pilot balloons.

**Plunger Position**

The position of the plunger is easily matched to the colour coded pilot balloon, thus ensuring correct inflation of the cuff.

The LarySeal Cuff Inflator has been specifically designed to only be used with the LarySeal range of Laryngeal Mask Airways, indicating the maximum amount of air by individual colour coded sizes.

**LarySeal Colour Coded Cuff Inflator**

038-94-001
Our silicone reusable laryngeal mask airways are designed to be sterilized and used up to a recommended 40 times. The LarySeal Multiple cuff adapts to the contour of the oropharyngeal area to provide a secure seal.

- Medical Grade Silicone
- Autoclavable

Secure Seal for Airway Management
Silicone allows the cuff of the mask to form itself to the contour of the oropharyngeal area providing a secure seal.

Crush Resistant
The thickness of the main tube wall reduces the risk of crushing.

Universal Connection
15mm Male connector provides a universal connection.

Autoclavable, Reusable
Durable high temperature resistant material. Recommended for up to 40 times autoclaving.

Easy indication of the cuff pressure through pilot balloon
Thin wall pilot balloon indicates the inflation of the cuff.

Colour Coded Pilot Balloon
Ease of identification of sizing by colour coded pilot balloons.

LarySeal Blue

The first silicone single patient use laryngeal mask airway introduced to provide the benefits of the well accepted reusable LarySeal with the benefits of single use, protecting against cross contamination.

- Medical Grade Silicone
- Single Use
- Cost Effective

Crush Resistant
The thickness of the main tube wall reduces the risk of crushing.

Universal Connection
15mm Male connector provides a universal connection.

Reduce the risk of cross contamination
Sterile product in secure packaging.

Less risk of slipping or dislocation
The silicone matt surface of the LarySeal Blue cuff provides good adhesion to the oropharyngeal area and reduces the risk of movement or dislocation of the cuff.

Easy indication of the cuff pressure through pilot balloon
Thin wall pilot balloon indicates the inflation of the cuff.

Colour Coded Pilot Balloon
Ease of identification of sizing by colour coded pilot balloons.

LarySeal Clear

LarySeal Clear is a single patient use PVC laryngeal mask airway, engineered using extra soft matt textured materials to replicate as closely as possible that of silicone, providing Anaesthetists the same feel as LarySeal Blue and LarySeal Multiple.

- Medical Grade PVC
- Single Use
- Cost Effective

Crush Resistant
The thickness of the main tube wall reduces the risk of crushing.

Less risk of slipping or dislocation
The satin surface finish of the LarySeal Clear cuff provides a similar texture to silicone, whilst ensuring ease of insertion.

Universal Connection
15mm Male connector provides a universal connection.

Cost Effective
Eliminates the need for cleaning and re-sterilizing, saving time and cost.

Easy indication of the cuff pressure through pilot balloon
Thin wall pilot balloon indicates the inflation of the cuff.

Colour Coded Pilot Balloon
Ease of identification of sizing by colour coded pilot balloons.

LarySeal MRI provides the same benefits of LarySeal Clear with the added benefit of a complete metal free inflation valve, allowing LarySeal MRI to be used within any MRI suite safely without distorting the images.

- Medical Grade PVC
- Single Use
- Cost Effective
- MRI Compatible

Crush Resistant
The thickness of the main tube wall reduces the risk of crushing.

Less risk of slipping or dislocation
The satin surface finish of the LarySeal MRI cuff provides a similar texture to silicone, whilst ensuring ease of insertion.

Metal Free Inflation Valve
The metal free construction of the valve allows the LarySeal to be used in MRI.

Colour Coded Pilot Balloon
Ease of identification of sizing by colour coded pilot balloons.

Universal Connection
15mm Male connector provides a universal connection.

Cost Effective
Eliminates cleaning and re-sterilizing, saving time and cost.

LarySeal Flexi

LarySeal Flexi is specially designed for use in ophthalmic, ENT, dental and other head and neck surgeries. The construction of the main tube allows it to be positioned well away from the surgical field, improving surgical access without compromising the seal. The LarySeal Flexi main tube is reinforced to avoid kinking and eliminate the risk of airway tube occlusion.

- Medical Grade PVC
- Single Use
- Cost Effective
- Flexible Main Tube

Reinforced
The main tube is reinforced with kink-free wire to eliminate the risk of airway tube occlusion.

Flexible Main Tube
The flexible main tube allows it to be positioned away from the surgical field, improving surgical access.

Universal Connection
15mm Male connector provides a universal connection.

Less risk of slipping or dislocation
The satin surface finish of the LarySeal Flexi cuff provides a similar texture to silicone, whilst ensuring ease of insertion.

Flexible Main Tube
Easy indication of the cuff pressure through pilot balloon
Thin wall pilot balloon indicates the inflation of the cuff.

Colour Coded Pilot Balloon
Ease of identification of sizing by colour coded pilot balloons.

LarySeal Plus

LarySeal Plus offers the convenience of combining a single patient use laryngeal mask airway, lubricating jelly and the LarySeal cuff inflator in one single pack for quick and effortless insertion.

Wide Choice
The all inclusive insertion pack is available with either LarySeal Blue or LarySeal Clear providing greater flexibility of clinical preference.

LarySeal Inflator
The colour coded cuff inflator corresponds with the colour coded pilot balloon which allows for quick identification of the maximum recommended fill volume.

Easy Open Lubricator
Each LarySeal Plus pack contains a single ease open packet of a water based lubricant to provide a generous coating to facilitate insertion.

Colour Coded Pilot Balloon
Provides a visual confirmation of the size of the LarySeal as well as corresponding to the cuff Inflator.
